## HIGH PRESSURE BOOSTER PUMPS

Flint & Walling High Pressure Booster Pumps are designed for when you need to add more pressure to your line to overcome head pressure from a long line or just need higher pressure at the end of the line.

We stock the F&W "PB" series in 3/4 hp up through 2 hp models. These pumps have a 3/4" suction and a 3/4" discharge to fit right into your line to boost pressure. The "PB" series pressure booster pumps stocked in Denver have powder coated cast iron ends with a stainless steel shell over the impeller stack.
