	WP5	String Wound Polypropylene 9-7/8" Sediment Cartridge	\$ 3.15
		<p>Ideal for fine sediment reduction, including sand, silt, scale and rust. Precise winding pattern ensures high efficiency rate and high dirt loading capacity. Cartridge is designed for general purpose filtration. Maximum temperature rating is 180 F. Stocked in 5 micron, but available in 1, 10, 20, 30, and 50 micron. When purchased in full case of 24 cartridges only \$ 2.95 each.</p>	
	EFWP520	String Wound Polypropylene 20" Sediment Cartridge	\$ 6.80
		<p>Same as WP-5 except for 20" double-length cartridge filters. Stocked in 5 micron. Available in 1, 10, 20, 30, and 50 micron.</p>	
	GAC10	Granular Activated Carbon 9-7/8" Taste & Odor Cartridge	\$ 11.65
		<p>Designed to reduce or eliminate unwanted tastes & odors such as chlorine. Water enters the canister type filter from the bottom and travels through the entire charcoal bed before exiting at the top. This design maximizes contact time with the carbon to insure maximum absorption. An internal expansion pad maintains a tight compact column to minimize channeling or by-pass. A sediment post filter reduces the content of carbon fines and any suspended particles.</p>	
	GAC20	Granular Activated Carbon 20" Taste & Odor Cartridge	\$ 25.70
		<p>Same as the GAC-10 except for 20" double-length cartridge filters.</p>	
	R50BBS	High Capacity Pleated Polyester Sediment Cartridge	\$ 17.00
		<p>These 9-3/4" cartridges fit the HD-15 high capacity filter (up to 25 gpm flow) and contain 20 square feet of media. The synthetic polyester construction will not support bacteria growth. Even though polyester filters can be washed and reused several times, reuse is not recommended if it is a potable water application. Stocked in 50 micron and available in 30 micron.</p>	
	PFC1	9-7/8" Dual Purpose Carbon Impregnated Cellulose Cartridge	\$ 6.95
		<p>This dual purpose cartridge provides taste / odor / chlorine reduction plus sediment filtration as well. This is an excellent "polishing" filter when used in process or closed loop systems. Designed for maximum dirt holding capacity. Available in 5 micron only.</p>	
	PFCBR210	1/2 micron Carbon Block Multimedia 9-3/4" Cartridge	\$ 28.15
		<p>Removes both metals and chemicals with a single cartridge. An acid washed carbon block cartridge removes unpleasant tastes and odors plus greatly reduces the amounts of dissolved heavy metals and the taste of chlorine. It will remove lead up to 96% and mercury up to 98%. This cartridge will remove up to 99% of giardia and cryptosporidium cysts and super fine sediment particles down to 1/2 micron in size.</p>	
	PFMC1	Mounting Bracket for standard 3/4" filter caps with bosses	\$ 7.50
	PFSW2	Spanner Wrench for standard filter housings	\$ 4.95
	PFSW3	Spanner Wrench for large diameter filter housings	\$ 7.50
